## Views received from Governments

## Germany

### German Policy and Practice on Exports of Conventional Weapons and Related Technology, Berlin, May 2012

Referring to General Assembly resolution 66/39 on transparency in armaments, in particular to paragraph 5: "Reaffirms its decision, with a view to further development of the Register, to keep the scope of and participation in the Register under review and, to that end: (a) recalls its request to Member States to provide the Secretary-General with their views on the continuing operation of the Register and its further dev 'opment and on transparency measures related to weapons of mass destruction", G rmany would like to make the following comments. The United Nations Register of Conventional Arms has proved to be one of the few and effective global transparency measures. Germany strongly supports this instrument and has regularly reported to the Secretary-General. Germany has also encouraged States to report in a comprehensive manner, including on small arms and light weapons. Germany believes that the inclusion of reporting on small arms and light weapons as a mandatory category of the United Nations Register would enhance in a substantive way the usefulness of this instrument. In many parts of the world, small arms and light weapons are the main factor of instability, often exceeding heavy weaponry as a stability challenge. In particular in Africa, it is small arms rather than heavy weaponry fuelling regional as well as intern al conflicts. The groups of governmental experts that convened in accordance with resolutions 57/75, 60/226 and 63/69 in 2003, 2006 and 2009, respectively, all debated the possibility to include small arms and light weapons into the Register. Germany believes that the arguments for such an inclusion have since been strengthened by events and would support a renewed debate in the upcoming Group of Governmental Experts to convene in 2012 and 2013 in accordance with resolution 66/39. Germany is concerned about the declining number of reports submitted to the Secretary-General since the beginning of the previous decade. Germany believes that a renewed effort should be made to strengthen the universal use of this instrument of transparency and trust-building. In all likelihood, the relevance of the Register will further increase substantially in the near future. With the perspective of the adoption of a universal treaty on the global trade in arms, the Register may serve in the future as a reference for further transparency measures. Germany would therefore welcome and support initiatives that promote an increased willingness to report in accordance with resolutions on transparency in armaments. In this context, Germany welcomes the new online reporting mechanism established by the United Nations Office for Disarmament Affairs. In view of the dynamic technological progress and the resulting changes regarding shape, operation and nature of conventional weapons, Germany regards it as essential to allow for a flexible and proper evolution of the Register. Owing to the recommendations of the respective groups of governmental experts, the Register has been further developed since its establishment. However, Germany believes that technology has evolved even faster in this period, blurring the distinctive features between Register categories and allowing for the emersion of new w.:aponry, potent enough to have an impact on overall military effectiveness, but without being properly reflected in the Register. Therefore, Germany believes that it is time for a more fundamental debate on the nature of the categories, in particular with regard to a further technological acceleration in the future.
